

MARKED-UP VERSION OF ABSTRACT

~~The invention relates to a~~ A container, in particular a collection chamber of a heat exchanger, comprising an opening [(2)], in which a connection [(5)] is mounted. To simplify the installation of the connection, the ~~latter~~ connection [(5)] has a deformable connection edge region ~~(10)~~ on the edge facing the container [(1)].; An ~~said~~ edge region ~~protruding~~ protrudes into the container [(1)] prior to the deformation process and after the deformation process lying at least partially against the interior of the container opening [(2)].

CLEAN VERSION OF ABSTRACT

A container, in particular a collection chamber of a heat exchanger, comprising an opening, in which a connection is mounted. To simplify the installation of the connection, the connection has a deformable connection edge region on the edge facing the container. An edge region protrudes into the container prior to the deformation process and after the deformation process lying at least partially against the interior of the container opening.
